Apollo Video Technology Awarded GSA Contract *Mobile Video Surveillance Solutions Widely Used in Transit, Law Enforcement and School Bus Applications*

NEW ORLEANS, October 4, 2011 – [Apollo Video Technology](http://www.apollovideotechnology.com)'s (Apollo Video) [mobile digital video surveillance](#) systems are now available for purchase to government agencies through the General Services Administration (GSA) Schedules Program. Apollo Video made the announcement from the American Public Transport Association 2011 EXPO in New Orleans, La.

GSA establishes long-term government wide contracts with commercial firms to provide access to millions of commercial supplies, products and services. Allowing government buyers to save time by making purchases through a pre-approved group of suppliers, GSA schedules are a preferred purchasing method. Apollo Video was added to the GSA schedule after an extensive approval process and positive evaluation of previously completed contracts.

"Apollo Video's availability on the GSA schedule provides a mutually beneficial opportunity and streamlines the purchasing process for our government customers – an opportunity that results in significant cost and time savings," said Rodell Notbohm, general manager of Apollo Video Technology. "Being awarded this opportunity through an assessment of the company's previous projects is an honor. We strive to be the best in customer service and look forward to providing the RoadRunner system to new government agencies."

The [RoadRunner system](#) is designed specifically for use in all types of mass transit, rail, and other vehicles. Recording up to 16 cameras simultaneously with industry-leading recording rates, higher resolutions and compression ideal for networking and remote access, the RoadRunner system is the highest performance system on the market today. The RoadRunner system provides months of on-board storage, years of maintenance-free operation and provides system-wide remote updates. Coupled with Apollo Video's ViM software, the system is designed to mitigate the risk of video loss, reduce maintenance and operating costs and increase accessibility of video surveillance and fleet data.

About Apollo Video Technology

Apollo Video Technology (www.avt-usa.com) is a leading manufacturer of on-board and in-car digital surveillance systems for public transit, school transportation, law enforcement, military, freight transport, and fire and EMS applications. With government and private-sector installations throughout North America and worldwide, Apollo Video's Mil-Spec and SAE rated RoadRunner line of video and audio systems simplifies

real-time video capture and reduces overall costs with exceptional quality, durability and easy offloading of video.

Since its release in 2004, The RoadRunner system has been installed in 320 agencies worldwide – representing over 12,000 total implementations. Apollo Video Technology has been selected to provide digital video and audio surveillance systems by prominent public agencies such as Chicago METRA, King County METRO, Kansas City Area Transit Authority, San Diego Metropolitan Transit System, Los Angeles County Metro Transportation Authority, City of Lincoln Nebraska and Winnipeg Transit.
